To whom it may concern:

USA Wrestling's National Coaches Education Program constantly seeks out the best products and information to help wrestling programs across the country deal with the negative effects of contagious skin infections.

After learning about Bioshield 75's ability to counteract and protect athletes from harmful conditions such as staph, MRSA, and impetigo the NCEP staff began to research this product.

As manager of the NCEP, I found the research and information about Bioshield 75 very compelling. I would encourage any wrestling program to look into utilizing Bioshield 75 to protect its wrestlers so that they can stay on the mats without the fear of nasty skin outbreaks.

Sincerely,

Ted Witulski
NCEP Manager
USA Wrestling
